

Plan and Configure Security

1. In **SSMS**, under Server Properties and Security, change the Authentication Mode to SQL and Windows.

2. Highlight your SQL Server Instance, right click, then Restart the SQL Server service.
3. Create a SQL Server login "Mary" with SQL Server Authentication and default settings. Generate and review scripts.

4. Add Mary to the AdventureWorks2012 database as a db owner user. Generate and review scripts.
5. Close SSMS and re-log in as Mary using SQL Server Authentication.
6. Navigate through the AdventureWorks2012 database to see whether you can access everything.
7. Submit scripts.
