

## Assignment #6: Plan and Configure Security

Create a partially contained database and connect to it directly

Working alone without step-by-step assistance from the instructor, perform the following tasks:

1. Open SQL Server Management Studio
2. Right click on your instance of SQL Server -> select Properties -> select Advanced -> ensure the "Enable Contained Databases" feature is set to True
3. Right click on Databases -> select New Database
4. Create a new database of the Partial Containment type

Collation:	<default>
Recovery model:	Full
Compatibility level:	SQL Server 2012 (110)
Containment type:	Partial

5. Name the database "ContainedDB"
6. Generate and execute the database creation script
7. Create a new dbowner user "Peter" in ContainedDB
8. Peter should have a user type of "SQL user with password"
9. Generate and execute the user creation script
10. Close SQL Server Management Studio
11. Open SQL Server Management Studio and connect to ContainedDB directly as "Peter"
12. Review and submit scripts to Canvas
