Lab #1

Validate the successful installation of the new named instance

1. SQL Server Management Studio can be used to quickly validate a successful instance installation.
2. The Installed SQL Server features discovery report can be used to verify the version of SQL Server and the SQL Server features installed on the computer.
   a. To run the Installed SQL Server features discovery report, click Tools in the left-hand navigation area of SQL Server Installation Center, and then click Installed SQL Server features discovery report.
3. You can also generate the Installed SQL Server features discovery report through the command line.
   a. Run "Setup.exe /Action=RunDiscovery" from a command prompt.
   b. If you add "/q" to the command line above, no UI will be shown, but the report will still be created in %ProgramFiles%\Microsoft SQL Server\110\Setup Bootstrap\Log\<last Setup Session>.
4. You can use the sp_server_info and sp_helpserver stored procedures to validate installation too.

Capture a screenshot for 2, 3 and 4. Submit the screenshots to Canvas.
